

Morgana Run Trail - Wheeling & Lake Erie Bikeway Cleveland, Ohio

In January 2003, The City of Cleveland and Slavic Village Development were awarded a NOACA Transportation Enhancement Fund Grant for the **Wheeling & Lake Erie Bikeway Project (Morgana Run)**. This project consisted of constructing a 2.34 mile long, 10-foot wide asphalt trail on the former Wheeling & Lake Erie Railroad ROW and the creation of designated bike lanes along several public streets.

The off road trail portion, follows the former W & LERR, and crosses several inner-city streets including Broadway Avenue, Ackley Ave., E.71st, E.72nd, E.74th, E.75th, E.76th, E.80th, and Aetna Rd. This trail also goes through Wollen Mills – one of the most toxic brownfield sites in Cleveland.

Geotechnical study was performed upon the site, which involved conducting a subsurface investigation of the corridor in compliance to ODOT standards.

As well as design of the trail, URS also performed construction supervision of the trail. This included assistance with bidding, including answering design related questions during the bidding period, assisting SVD and the City in evaluating the bids received, review of shop drawings, review and approval of monthly pay requests, review of change order requests and pricing, attendance at weekly job meetings, and telephone support with site visits as required resolving design issues.

The trail alignment weaved between Brownfields and Historic Industrial areas

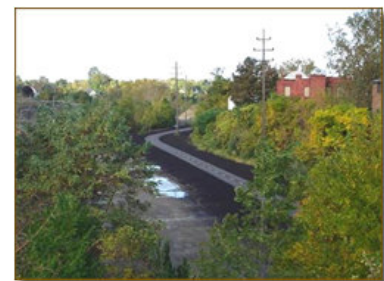

Art was included alongside the trail

Separation between recreation and industrial uses was a critical design factor
