Weiss Park Master Plan and Design

Avon Lake, Ohio

In 2004, URS was contracted by the City of Avon Lake to reconfigure the northwestern portion (about 25 acres) of Weiss Field to incorporate eleven baseball diamonds, ranging in size from regulation baseball to T-ball.

Facilities in the design included: ballfields, dugouts, waterlines, electrical service, concrete pads for bleachers, concrete walkways, asphalt walk paths, outfield fences, surface and surface drainage, asphalt parking lots with lighting, water services to ballfields, and outfield irrigation.

URS developed a master plan for the entire Weiss Field Park area of approximately 75 acres. The objective of this master plan is to insure that the approximately 25 acres of baseball improvements (phase1) fit in with the other present and future park uses.

URS developed color rendered conceptual park master plan locating baseball fields, lighting, concession stand, parking lot layout, horse ring, and utility improvements. Drainage improvements, stormwater management, loop trails, and ecological restoration opportunities were evaluated.

Upon completion of the master plan, URS developed preliminary design documents, design development drawings, and finally construction documents, specifications, and bid documents for phase 1.

Construction of Phase 1, a $ 1 million project to improve 8 ballfields was completed in late 2004 to co-inside with the off season, therefore reducing the non-play dates for the athletic fields.
